

TenderAlpha's G2B and B2B Multi-Tier Supply Chain Capabilities

TenderAlpha's multi-tier supply chain solution, provides unique insight into supplier networks, by mapping relationships beyond direct suppliers to uncover indirect links across multiple tiers. Using a juxtaposition of various proprietary datasets, we are the only provider of multi-tier supply chain data on government agency level (G2B), in addition to multi-tier supply chain data on the company level (B2B).

The datasets are ticker-mapped for publicly listed companies and are constructed using a proprietary methodology for mapping the supply chain networks of companies and any strategic government buyer, based on a combination of data sources:

- **Government Contracting Data:** Awarded government contracts, from more than 50 countries, featuring over 125 million contracts and with coverage since 2010
- **Trade Flows Data:** Detailed import/export and shipment-level activity, from more than 150 countries, with over 2.5 billion transactions captured since 2019
 - Sourced from customs, bill of lading and cargo data
- **Government Subcontracting Data:** Verified relationships from public procurement and subcontracting records, capturing over 300,000 subcontracts since 2018
- **Direct Corporate Relationship Data:** Company-reported disclosures of subsidiaries, affiliates, and key partnerships, featuring **over 200,000 unique B2B relationships**
