

Kpler MCP

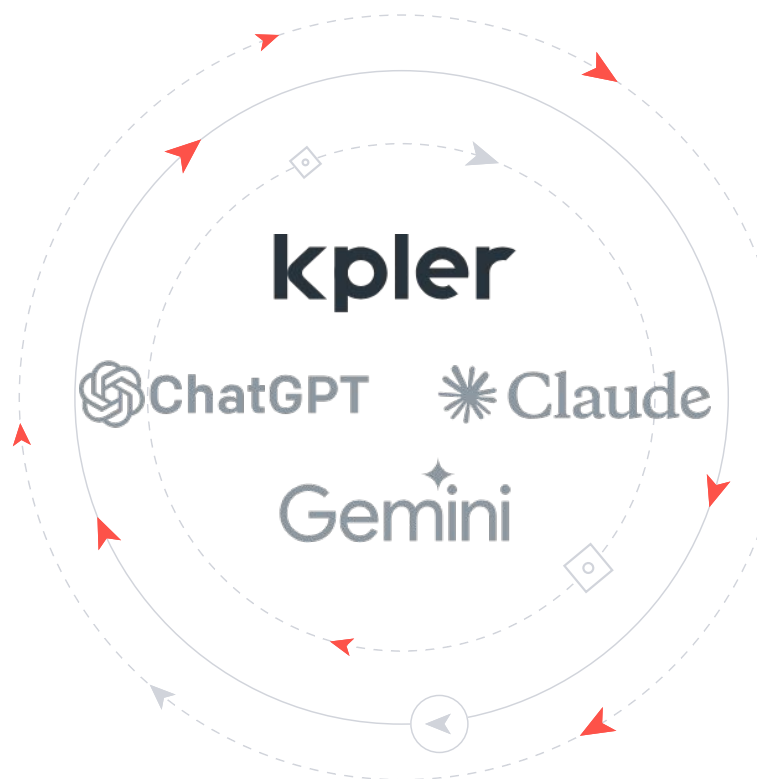

The future of enterprise intelligence

High fidelity contextual intelligence

Kpler MCP is a powerful integration layer that ensures fidelity between your AI environment and Kpler datasets and specific business logic. Through contextual intelligence, Kpler MCP delivers precise and consistent answers at scale without custom integrations, wherever you need it within your workflows.

With Kpler MCP you can

- Fuse your proprietary intelligence and third-party data with Kpler curated datasets to create a singular, unified market view available when and where you need it within your workflows.
- Integrate seamlessly into any AI strategy ranging from simple chat interfaces to fully autonomous agents via Streamlit, Google ADK, or n8n, as well as leading LLMs like ChatGPT, Gemini, and Claude.
- Solve complex queries at the user level with natural language, eliminating the need for SQL expertise, custom APIs, or manual data engineering, accessible across your workflow.
- Accelerate critical decision-making cycles and remove technical bottlenecks by giving traders and analysts direct access to insights.

Save development time, reduce risk and make better decisions faster with Kpler MCP.
